CENSUS NEWS 2000

INTRODUCTION

This document is the first in a series to describe the demographics of Baltimore City. Future issues of *Census News 2000* will highlight trends in households and age, housing characteristics, income and poverty, employment and many other issues. This issue, based on data from the first Summary File release of the Census Bureau, contains information about population and racial characteristics.

In this series, we will present data that has been aggregated into 264 Neighborhood Statistical Areas. Data at the tract level and other census reports are available at the Census Bureau website www.census.gov and the Maryland State Data Center at www.mdp.state.md.us/msdc.

Wherever possible, we will compare 2000 Census data with 1990 data. However, we may not be able to accurately compare racial data. The 2000 Census allowed respondents to choose multiple racial groups, while respondents were allowed to choose only one racial group in 1990.

It is my hope that this information will inform the many public and private agencies, neighborhoods, businesses, community institutions and citizens that comprise America's Greatest City.

Charles C. Graves, III
Director of Planning

POPULATION AND RACE

Regional Perspective

The decade of the 1990's saw a continued decrease in the total population for the City of Baltimore. The census count for Baltimore City as of April 1, 2000 was 651,154. In total, the City lost 84,860 residents or about 11.5%. For cities with total populations of 100,000 or more, Baltimore had one of the highest population losses both in real and percentage terms. Baltimore dropped in rank from the 13th to the 17th largest city in the United States.

The population loss in Baltimore is not unlike that of other northeastern cities, in which population has been relocating to suburban areas at the expense of the urban core. Table 1 shows a comparison of Baltimore to other cities that have experienced long-term population decrease. The shaded area indicates the percentage change of total population between decades.

Source: U.S. Census Bureau

However, the Baltimore Primary Metropolitan Statistical Area (PMSA), which is a Census definition, experienced a net gain in population of 7.2% (Map 1). This would indicate that the metropolitan area remains a magnet for relocation, but the population growth is occurring outside of the urban center of Baltimore.
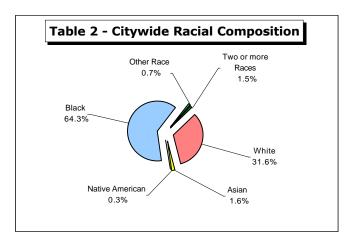

Race and Ethnicity in Baltimore

In 2000, the Census Bureau attempted to more accurately measure the growing diversity of our nation by allowing respondents more choices for identifying their race. However, as the number of categories increases over time, racial comparisons become more complicated.

Table 2 shows the racial composition of Baltimore City as of April 1, 2000. Since 1980, Black or African American has been the most prevalent racial classification. Although respondents identifying themselves as Black (64.3%) are a higher percentage of the total than in 1990 (59.1%), the total population of African Americans decreased for the first time in a half-century, mostly due to migration to Baltimore County. Respondents identifying themselves as White totaled 205,982 or 31.6% of the total population. This represents a decrease in White total population of more than 28% since 1990.

Baltimore's Primary Metropolitan Statistical Area has grown 7.2% since 1990

Asians, including Pacific Islanders, increased by over 28% in the past ten years to a 1.6% share of the total. The Native American population, including American Indian and Alaska Native, remained the smallest racial classification in Baltimore City at 0.3%.

The growing diversity within Baltimore City is reflected in the increasing number of respondents that reported themselves as Some Other Race, which has more than doubled since 1990.   Similarly, the newest Census category of Two or More Races was chosen by 9,554 of the respondents or 1.5% of the total city population.

Total Population in Baltimore

Baltimore City has 264 Neighborhood Statistical Areas (NSA). These NSA follow recognized neighborhood boundaries better than census tract boundaries. While housing will be discussed in greater detail in a future issue of *Census News 2000*, demolition of high-density public housing units in the late 1990's prompted a redistribution of the population within the city. This relationship should be noted when considering large decreases in areas formerly home to such units. Beginning on the next page, Table 3 shows the total population and race of Baltimore by neighborhood.
